

Which
debugging environment
(pdb, ipdb, PyCharm ..)
are you using?

What is your favourite
debugging method?

What other debugging
methods do you know?

When do you recommend
`print` statements for
debugging?

Do you take notes on
paper while debugging?

Have you used contract-
based programming?

What have you used
assertions
in Python code for?

What is your opinion on
type hints?

Do you recall a really
tough bug?

How did you fix it?

Have you seen a
Heisenbug?

Are you using user-
defined Exceptions?

When?

Do you find a language
other than Python easier
to debug?
